**Ref: Field Trip: The Journey of Water-From Nature to Us**

Dear Parents,

About 71 percent of the Earth's surface is covered with water. Water also exists in various forms. We get water from various sources for our daily chores. We all have learnt about this in school in Environmental Studies.

At SVM, we believe learning outside classroom enhances the critical thinking skills and gives learners a chance to think about the concept from a different perspective. Hence, we have planned a field trip for our young minds to understand the sources of water and its conservation.

Learners will also learn about different types of houses (Kuccha and Pucca).

This field visit aims to provide an opportunity to step out of life's normal routines and experience something completely new which in turn is a great way of learning outside the classroom.

**A few objectives of this visit are as follows:**

- To understand different sources of water.
- To observe water conservation methods.
- To observe and analyse different types of houses.

**Details about the visit is given below:**

**Date:** 23<sup>rd</sup> August 2023

**Venue:** Kolambe

**Time:** Within school hours

**Things to carry:** House Tshirts and blue trousers, handkerchief, umbrellas, ID cards.

Yours truly,

**Ms. Monica Jaiswal**

**Principal**

**Sarvankash Vidya Mandir**
